ITEM

- 18a. Give: (1) the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method; (2) the details of subsequent stages of selection and multiplication; (3) evidence of uniformity and stability; and (4) the type and frequency of variants during reproduction and multiplication and state how these variants may be identified.
- 18b. Give a summary of the variety's distinctness. Clearly state how this application variety may be distinguished from all other varieties in the same crop. If a new variety is most similar to one variety or a group of related varieties:
- (1) Identify these varieties and state all differences objectively;
 - (2) attach statistical data for characters expressed numerically and demonstrate that these are clear differences; and
 - (3) submit, if helpful, seed and plant specimens or photographs (prints) of seed and plant comparisons which clearly indicate distinctness.
- 18c. Exhibit C forms are available from the PVPO Office for most crops; specify crop kind. Fill in Exhibit C (Objective Description of Variety) form as completely as possible to describe your variety.
- 18d. Optional additional characteristics and/or photographs. Describe any additional characteristics that cannot be accurately conveyed in Exhibit C. Use comparative varieties as is necessary to reveal more accurately the characteristics that are difficult to describe, such as plant habit, plant color, disease resistance, etc.
- 18e. Section 52(5) of the Act requires applicants to furnish a statement of the basis of the applicant's ownership. An Exhibit E form is available from the PVPO.
19. If "Yes" is specified (*seed of this variety be sold by variety name only, as a class of certified seed*), the applicant MAY NOT reverse this affirmative decision after the variety has been sold and so labeled, the decision published, or the certificate issued. However, if "No" has been specified, the applicant may change the choice. (See *Regulations and Rules of Practice, Section 97.103*).
22. See Sections 41, 42, and 43 of the Act and Section 97.5 of the regulations for eligibility requirements.
23. See Section 55 of the Act for instructions on claiming the benefit of an earlier filing date.
21. CONTINUED FROM FRONT (Please provide a statement as to the limitation and sequence of generations that may be certified.)

22. CONTINUED FROM FRONT (Please provide the date of first sale, disposition, transfer, or use for each country and the circumstances, if the variety (including any harvested material) or a hybrid produced from this variety has been sold, disposed of, transferred, or used in the U.S. or other countries.)

23. CONTINUED FROM FRONT (Please give the country, date of filing or issuance, and assigned reference number, if the variety or any component of the variety is protected by intellectual property right (Plant Breeder's Right or Patent).)

Exhibit A

Origin and Breeding History of the Variety

Summer 2000	DP 5110 S was crossed with an F1 plant from the cross (DP 4748 S X DP 4690 RR) at Scott, MS.
Winter 2000-2001	F1 advanced to F2 under lights in Costa Rica.
Summer -Fall 2001	F2 advanced to F3 by the bulk pod method in Costa Rica. Individual F3 plants were harvested.
Winter 2001-2002	F3 derived F4 progeny rows were planted and 120 rows were randomly selected, including row J00173-14. Plants in row J00173-14 were harvested in bulk.
Summer 2002	Yield tests of 120 lines from the cross were conducted at Scott, MS. J00173-14 was found to be uniform for the characteristics listed in Exhibit C of this application. J00173-14 was advanced based on measured seed yield. Five pounds of seed were sent to winter nursery for two-generation increase.
Summer 2003	J00173-14 was yield tested at 11 locations in southern US. Twenty units of seed were produced. Two units were sent to winter nursery for increase.
Summer 2004	J00173-14 was yield tested at 8 locations in southern US. There were 59 acres of seed production. 1,781 Bushels of seed were produced. The name 3133014 was assigned. After three years of testing and seed increase 3133014 has been observed to be uniform and genetically stable over generations for characteristics listed in Exhibit C of this application. No variants were observed.
